S.No: 1 Exp. Name: sample programs on operator precedence and associativity Date: 2022-12-03

Aim:

Write a java program to demonstrate operator precedence and associativity

Source Code:

```
OperatorPrecedence.java
```

```
import java.util.Scanner;
class OperatorPrecedence{
    public static void main(String[] args) {
        int x,result;
        System.out.print("Enter a num: ");
        Scanner sc=new Scanner(System.in);
        x=sc.nextInt();
        result=x++ +x++*--x/x++ - --x+3>>1|2;
        System.out.println("The operation going is x++ + x++ * --x
/ x++ - --x + 3 >> 1 | 2");
        System.out.println("result = "+result);
    }
}
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Enter a num:
4
The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 | 2
result = 3
Test Case - 2
User Output
Enter a num:
-3
The operation going is x++ + x++ * --x / x++ - --x + 3 >> 1 | 2
result = 2
```

S.No: 2 Exp. Name: Sample program on java to demonstrate

Control structures

Date: 2022-12-03

Aim:

write a java program that uses if-else control statement and print the result

Source Code:

Control.java

```
import java.util.Scanner;
class Control{
public static void main(String args[]) {
    int x,y,z;
    Scanner sc = new Scanner(System.in);
    System.out.print("Enter first num : ");
    x=sc.nextInt();
```

```
Test Case - 1
User Output
Enter first num :
13
Enter second num :
5
x + y is less than 20
Test Case - 2
User Output
Enter first num :
24
Enter second num :
10
x + y is greater than 20
                 Exp. Name: Sample Program to demonstrate
                                                                Date: 2022-12-03

                                constructor
```

Aim:

Write a program to demonstrate constructor class

Source Code:

Student.java

```
class Student{
    int num;
    String name;
    //method to display the value of num and name
    void display() {
        System.out.println(num+" "+name);
    }

public static void main(String args[]) {
        //creating objects
        Student s1=new Student();
        Student s2=new Student();
        //displaying values of the object
        s1.display();
        s2.display();
}
```

```
Test Case - 1
User Output
0 null
0 null
```

S.No: 4 Exp. Name: Sample program to demonstrate destructor Date: 2022-12-04

Aim:

Write a program to demonstrate destructor class

Source Code:

```
DestructorExample.java
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Object is destroyed by the Garbage Collector
Inside the main() method
Object is destroyed by the Garbage Collector
```

S.No: 5 Exp. Name: A program to print Half pyramid pattern Date: 2022-12-03 Aim:

Write a Java program to print Half Pyramid pattern.

Source Code:

HalfPyramid.java

```
import java.util.Scanner;
public class HalfPyramid{
    public static void main(String args[])
    {
        Scanner sc = new Scanner(System.in);

S.No: 11 Exp. Name: A program to illustrate Inheritance Date: 2022-12-11 Aim:

Write Java program on use of Inheritance.

Create a classVehicle

- contains the data members color of String type and speed and size of integer data type.
- write a methodsetVehicleAttributes()to initialize the data members

Create another classCarwhich is derived from the classVehicle

- contains the data membersccandgearsofinteger data type
- write a methodsetCarAttributes()to initialize the data members
- write a method**displayCarAttributes**()which will display all the attributes.

Write another class InheritanceDemo with **main()** it receives five arguments **color**, **speed**, **size**, **cc** and **gears**.

Source Code:

InheritanceDemo.java

```
import java.util.Scanner;
class Vehicle{
    String color;
    int speed;
    int size;
    void setVehicleAttributes(String c,String s,String sp){
        color = c;
        speed = Integer.parseInt(s);
        size = Integer.parseInt(sp);
    }
}
class Car extends Vehicle {
    int CC;
    int gears;
    void setCarAttributes(String c,String s,String sp,String cce,String gear){
```

```
setVehicleAttributes(c,s,sp);
    CC = Integer.parseInt(cce);
    gears = Integer.parseInt(gear);
    displayCarAttributes();
}
void displayCarAttributes(){
        System.out.println("Color of Car : "+color);
        System.out.println("Speed of Car : "+speed);
        System.out.println("Size of Car : "+size);
        System.out.println("CC of Car : "+CC);
        System.out.println("No of gears of Car : "+gears);
}

public class InheritanceDemo{
    public static void main(String args[])
    {
        Car b1 = new Car();
        b1.setCarAttributes(args[0],args[1],args[2],args[3],args[4]);
    }
}
```

```
Test Case - 1
User Output
Color of Car : Blue
Speed of Car : 100
Size of Car : 20
CC of Car : 1000
No of gears of Car : 5
Test Case - 2
User Output
Color of Car : 0range
Speed of Car : 120
Size of Car : 25
CC of Car : 900
No of gears of Car : 5
```

S.No: 12 Exp. Name: write a java program to prevent inheritance using abstract class.

Aim:

write a java program to prevent inheritance using abstract class.

- Create an abstract class Shape
- Create a class Rectangle which extends the class Shape
- Class Rectangle contains a method **draw** which prints **drawing rectangle**

Date: 2022-12-11

- Create another class circle1 which extends Shape
- Class circle1 contains a method **draw** wheih prints **drawing circle**
- Create a main class TestAbstraction1
- Create object for the class circle1 and called the method draw

Source Code:

TestAbstraction1.java

```
abstract class shape{
    abstract void draw();
```

Test Case - 1 User Output drawing circle

S.No: 13 Exp. Name: *program on dynamic binding* Date: 2022-12-11 Aim:

```

S.No: 15 Exp. Name: Sample program on method overriding Date: 2022-12-11 Aim:

Write a program on method overriding

Source Code:

```
Bike.java
```

class Vehicle{

Test Case - 1 User Output Bike is running safely

S.No: 16 Exp. Name: Write a Java program to implement Interface Date: 2022-12-11

Aim:

Write a Java program that implements an **interface**.

Create an interface called Car with two abstract methods String getName() and int getMaxSpeed(). Also declare one **default** method void applyBreak() which has the code snippet

```
System.out.println("Applying break on " + getName());
```

In the same interface include a **static** method Car getFastestCar(Car car1, Car car2), which returns **car1** if the **maxSpeed** of **car1** is greater than or equal to that of **car2**, else should return **car2**.

Create a class called BMW which implements the interface Car and provides the implementation for the abstract methods **getName()** and **getMaxSpeed()** (make sure to declare the appropriate fields to store **name** and **maxSpeed** and also the constructor to initialize them).

Similarly, create a class called Audi which implements the interface Car and provides the implementation for the abstract methods **getName()** and **getMaxSpeed()** (make sure to declare the appropriate fields to store **name** and **maxSpeed** and also the constructor to initialize them).

Create a **public** class called MainApp with the **main()** method.

Take the input from the command line arguments. Create objects for the classes BMW and Audi then print the fastest car.

Note:

Java 8 introduced a new feature called default methods or defender methods, which allow developers to add new methods to the interfaces without breaking the existing implementation of these interface. These **default** methods can also be overridden in the implementing classes or made abstract in the extending interfaces. If they are not overridden, their implementation will be shared by all the implementing classes or sub interfaces.

Similarly, **Java 8** also introduced static methods inside interfaces, which act as regular static methods in classes. These allow developers group the utility functions along with the interfaces instead of defining them in a separate helper class.

Note: Please don't change the package name.

Source Code:

q11284/MainApp.java

```
package g11284;
interface Car {
       public String getName();
       public int getMaxSpeed();
       public default void applyBreak() {
               System.out.println("applying Break on "+getName());
       public static Car getFastestCar(Car a, Car b) {
               if(a.getMaxSpeed()>b.getMaxSpeed())
               return a;
               else
               return b;
        }
class BMW implements Car {
       String name;
       int speed;
       public BMW(String n,String s){
               speed=Integer.parseInt(s);
               name=n;
        }
       public String getName() {
               return name;
        }
       public int getMaxSpeed() {
               return speed;
        }
class Audi implements Car {
       String name;
       int speed;
       public Audi(String n, String s) {
```

```
Test Case - 1
User Output
Fastest car is : BMW
Test Case - 2
User Output
Fastest car is : Maruthi
```

Exp. Name: program to create a super class called
S.No: 24

Figure that it returns the area of a rectangle and triangle

Date: 2022-12-11

Aim:

Write a java program to create a super class called Figure that receives the dimensions of two dimensional objects. It also defines a method called area that computes the area of an object. The program derives two sub-classes from Figure. The first is Rectangle and second is Triangle. Each of the sub classes override area() so that it returns the area of a rectangle and triangle respectively

Source Code:

AbstractAreas.java

```
import java.util.*;
abstract class Figure{
    double dim1;
    double dim2;
    double dim3;
    double dim4;
    Figure(double a, double b) {
        dim1=a;
        dim2=b;
        dim3=a;
        dim4=b;
```

```
abstract void area();
class Rectangle extends Figure{
       Rectangle (double a, double b)
               super(a,b);
       void area() {
               double Area=dim1*dim2;
               System.out.println("Rectangle:");
               System.out.println("Area is "+Area);
        }
class Triangle extends Figure{
       Triangle (double a, double b)
               super(a,b);
        }
       void area() {
               double Area=(dim3*dim4)/2;
               System.out.println("Triangle:");
               System.out.println("Area is "+Area);
        }
class AbstractAreas{
       public static void main(String args[]){
               System.out.println("Enter lenght and breadth of Rectangle
:");
               Scanner input = new Scanner(System.in);
               double dim1=input.nextDouble();
               double dim2=input.nextDouble();
               System.out.println("Enter height and side of Triangle :");
               Scanner input1 = new Scanner(System.in);
               double dim3=input1.nextDouble();
               double dim4=input1.nextDouble();
               Rectangle r=new Rectangle(dim1,dim2);
               Triangle t=new Triangle(dim3,dim4);
               Figure figuref;
               figuref = r;
               figuref.area();
               figuref=t;
               figuref.area();
        }
```

```
Test Case - 1
User Output
Enter lenght and breadth of Rectangle:
12
14
Enter height and side of Triangle:
7
5
Rectangle:
Area is 168.0
```

```
Triangle:
Area is 17.5

Test Case - 2

User Output

Enter lenght and breadth of Rectangle:
4

8

Enter height and side of Triangle:
5

3

Rectangle:
Area is 32.0

Triangle:
Area is 7.5
```

S.No: 25 Exp. Name: Write a Java program demonstrating the usage of Threads

Date: 2022-12-27

Aim:

Write a Java program that uses three threads to perform the below actions:

- 1. First thread should print "Good morning" for every 1 second for 2 times
- 2. Second thread should print "Hello" for every 1 seconds for 2 times
- 3. Third thread should print "Welcome" for every 3 seconds for 1 times

Write appropriate **constructor** in the Printer class which implements Runnable interface to take three arguments: **message**, **delay** and count of types **String**, **int** and **int** respectively.

Write code in the Printer.run() method to print the **message** with appropriate **delay** and for number of times mentioned in **count**.

Write a class called ThreadDemo with the main() method which instantiates and executes three instances of the above mentioned Printer class as threads to produce the desired output.

[Note: If you want to sleep for 2 seconds you should call Thread.sleep(2000); as the Thread.sleep(...) method takes milliseconds as argument.]

Note: Please don't change the package name.

Source Code:

q11349/ThreadDemo.java

```
class Printer implements Runnable {
        String message;
        int delay, count;
        Printer(String a, int b, int c)
                message=a;
                delay=b;
                count=c;
        }
        public void run()
                for(int i=0;i<count;i++)</pre>
                        System.out.println(message);
                        try{
                                 Thread.sleep(delay*1000);
                         }
                        catch(InterruptedException ie)
                                 System.out.println(ie);
                         }
                }
        }
```

```
Test Case - 1
```

User Output

```
Good morning
Hello
Welcome
Good morning
Hello
All the three threads t1, t2 and t3 have completed execution.
```

S.No: 11 Exp. Name: A program to illustrate Inheritance Date: 2022-12-11

Aim:

Write Java program on use of Inheritance.

Create a classVehicle

- contains the data members color of String type and speed and size of integer data type.
- write a methodsetVehicleAttributes()to initialize the data members

Create another classCarwhich is derived from the classVehicle

- contains the data membersccandgearsofinteger data type
- write a methodsetCarAttributes()to initialize the data members
- write a method**displayCarAttributes**()which will display all the attributes.

Write another class InheritanceDemo with **main()** it receives five arguments **color**, **speed**, **size**, **cc** and **gears**.

Source Code:

InheritanceDemo.java

```
import java.util.Scanner;
class Vehicle{
       String color;
       int speed;
       int size;
       void setVehicleAttributes(String c,String s,String sp) {
               color = c;
               speed = Integer.parseInt(s);
               size = Integer.parseInt(sp);
        }
class Car extends Vehicle {
       int CC;
       int gears;
       void setCarAttributes(String c, String s, String sp, String cce, String
gear) {
               setVehicleAttributes(c,s,sp);
               CC = Integer.parseInt(cce);
               gears = Integer.parseInt(gear);
               displayCarAttributes();
        }
       void displayCarAttributes() {
               System.out.println("Color of Car : "+color);
               System.out.println("Speed of Car : "+speed);
               System.out.println("Size of Car : "+size);
               System.out.println("CC of Car : "+CC);
               System.out.println("No of gears of Car : "+gears);
        }
public class InheritanceDemo{
       public static void main(String args[])
               Car b1 = new Car();
```

```
b1.setCarAttributes(args[0],args[1],args[2],args[3],args[4]);
}
```

Srinivasa Ramanujan Institute of Technology 2021-2025-CSE-A

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
Color of Car : Blue
Speed of Car : 100
Size of Car : 20
CC of Car : 1000
No of gears of Car : 5
Test Case - 2
User Output
Color of Car : 120
Size of Car : 25
CC of Car : 900

S.No: 12 Exp. Name: write a java program to prevent inheritance using abstract class.

Date: 2022-12-11

Aim:

write a java program to prevent inheritance using abstract class.

- Create an abstract class Shape
- Create a class Rectangle which extends the class Shape
- Class Rectangle contains a method **draw** which prints **drawing rectangle**
- Create another class circle1 which extends Shape
- Class circle1 contains a method **draw** which prints **drawing circle**
- Create a main class TestAbstraction1
- Create object for the class circle1 and called the method draw

Source Code:

TestAbstraction1.java

```
abstract class shape{
    abstract void draw();
}
class Rectangle extends shape
{
    void draw()
    {
        System.out.println("drawing rectangle");
    }
}
class Circle1 extends shape
{
    void draw()
    {
        void draw()
    }
}
```

```
System.out.println("drawing circle");
}
class TestAbstraction1{
    public static void main(String args[])
    {
        shape s = new Circle1();
        s.draw();
    }
}
```

Test Case - 1

User Output

drawing circle

Srinivasa Ramanujan Institute of Technology 2021-2025-CSE-A

S.No: 16 Exp. Name: Write a Java program to implement

Interface

Aim:

Write a Java program that implements an **interface**.

Create an interface called Car with two abstract methods String getName() and int getMaxSpeed(). Also declare one **default** method void applyBreak() which has the code snippet

Date: 2022-12-11

```
System.out.println("Applying break on " + getName());
```

In the same interface include a **static** method Car getFastestCar(Car car1, Car car2), which returns **car1** if the **maxSpeed** of **car1** is greater than or equal to that of **car2**, else should return **car2**.

Create a class called BMW which implements the interface Car and provides the implementation for the abstract methods **getName()** and **getMaxSpeed()** (make sure to declare the appropriate fields to store **name** and **maxSpeed** and also the constructor to initialize them).

Similarly, create a class called Audi which implements the interface Car and provides the implementation for the abstract methods **getName()** and **getMaxSpeed()** (make sure to declare the appropriate fields to store **name** and **maxSpeed** and also the constructor to initialize them).

Create a **public** class called MainApp with the **main()** method.

Take the input from the command line arguments. Create objects for the classes BMW and Audi then print the fastest car.

Note:

Java 8 introduced a new feature called default methods or defender methods, which allow

developers to add new methods to the interfaces without breaking the existing implementation of these interface. These **default** methods can also be overridden in the implementing classes or made abstract in the extending interfaces. If they are not overridden, their implementation will be shared by all the implementing classes or sub interfaces.

```
Below is the syntax for declaring a default method in an interface:
```

```
public default void methodName() {
          System.out.println("This is a default method in interface");
}
```

Similarly, **Java 8** also introduced static methods inside interfaces, which act as regular static methods in classes. These allow developers group the utility functions along with the interfaces instead of defining them in a separate helper class.

Below is the syntax for declaring a static method in an **interface**:

ID: 214G1A0527 Page No:

Srinivasa Ramanujan Institute of Technology 2021-2025-CSE-A

Note: Please don't change the package name.

Source Code:

q11284/MainApp.java

```
package q11284;
interface Car {
       public String getName();
       public int getMaxSpeed();
       public default void applyBreak() {
               System.out.println("applying Break on "+getName());
        }
       public static Car getFastestCar(Car a, Car b) {
               if(a.getMaxSpeed()>b.getMaxSpeed())
               return a;
               else
               return b;
        }
class BMW implements Car {
       String name;
       int speed;
       public BMW(String n, String s) {
               speed=Integer.parseInt(s);
               name=n;
        }
       public String getName() {
               return name;
       public int getMaxSpeed() {
              return speed;
class Audi implements Car {
       String name;
       int speed;
```

Exp. Name: program to create a super class called Figure that it returns the area of a rectangle and

triangle

Date: 2022-12-11

Aim:

S.No: 24

Write a java program to create a super class called Figure that receives the dimensions of two dimensional objects. It also defines a method called area that computes the area of an object. The program derives two sub-classes from Figure. The first is Rectangle and second is Triangle. Each of the sub classes override area() so that it returns the area of a rectangle and triangle respectively

Source Code:

AbstractAreas.java

ID: 214G1A0527 Page No:

```
import java.util.*;
abstract class Figure{
       double dim1;
       double dim2;
       double dim3;
        double dim4;
        Figure (double a, double b) {
                dim1=a;
                dim2=b;
                dim3=a;
                dim4=b;
        }
        abstract void area();
class Rectangle extends Figure{
        Rectangle (double a, double b)
        {
                super(a,b);
        }
        void area() {
                double Area=dim1*dim2;
                System.out.println("Rectangle:");
                System.out.println("Area is "+Area);
        }
class Triangle extends Figure{
        Triangle (double a, double b)
                super(a,b);
        }
        void area(){
                double Area=(dim3*dim4)/2;
                System.out.println("Triangle:");
                System.out.println("Area is "+Area);
```

```
}
class AbstractAreas{
       public static void main(String args[]) {
               System.out.println("Enter lenght and breadth of Rectangle
:");
               Scanner input = new Scanner(System.in);
               double dim1=input.nextDouble();
               double dim2=input.nextDouble();
               System.out.println("Enter height and side of Triangle :");
               Scanner input1 = new Scanner(System.in);
               double dim3=input1.nextDouble();
               double dim4=input1.nextDouble();
               Rectangle r=new Rectangle(dim1,dim2);
               Triangle t=new Triangle(dim3,dim4);
               Figure figuref;
               figuref = r;
               figuref.area();
               figuref=t;
               figuref.area();
        }

Srinivasa Ramanujan Institute of Technology 2021-2025-CSE-A

S.No: 25 Exp. Name: Write a Java program demonstrating the usage of Threads

Date: 2022-12-27

Aim:

Write a Java program that uses three threads to perform the below actions:

- 1. First thread should print "Good morning" for every 1 second for 2 times
- 2. Second thread should print "Hello" for every 1 seconds for 2 times
- 3. Third thread should print "Welcome" for every 3 seconds for 1 times

Write appropriate **constructor** in the Printer class which implements Runnable interface to take three arguments: **message**, **delay** and count of types **String**, **int** and **int** respectively.

Write code in the Printer.run() method to print the **message** with appropriate **delay** and for number of times mentioned in **count**.

Write a class called ThreadDemo with the main() method which instantiates and executes three instances of the above mentioned Printer class as threads to produce the desired output.

[Note: If you want to sleep for 2 seconds you should call Thread.sleep(2000); as the Thread.sleep(...) method takes milliseconds as argument.]

Note: Please don't change the package name.

Source Code:

q11349/ThreadDemo.java

ID: 214G1A0527 Page No:

Srinivasa Ramanujan Institute of Technology 2021-2025-CSE-A

```
package q11349;
public class ThreadDemo {
       public static void main(String[] args) throws Exception {
               Thread t1 = new Thread(new Printer("Good morning", 1, 2));
               Thread t2 = new Thread(new Printer("Hello", 1, 2));
               Thread t3 = new Thread(new Printer("Welcome", 3, 1));
               t1.start();
               t2.start();
               t3.start();
               t1.join();
               t2.join();
               t3.join();
               System.out.println("All the three threads t1, t2 and t3
have completed execution.");
   }
class Printer implements Runnable {
       String message;
       int delay, count;
       Printer(String a, int b, int c)
               message=a;
               delay=b;
               count=c;
       }
       public void run()
               for(int i=0;i<count;i++)</pre>
                       System.out.println(message);
                       try{
                               Thread.sleep(delay*1000);
```

```
Test Case - 1
```

User Output

Good morning Hello Welcome Good morning Hello

All the three threads t1, t2 and t3 have completed execution.

Write a java program(s) that use collection framework classes.(HashMap class)

Source Code:

HashMapclass.java

```
import java.util.*;
public class HashMapclass{
       public static void main(String[] args) {
               Scanner inp = new Scanner(System.in);
               HashMap<String,Integer> hashMap = new
HashMap<String,Integer>();
               System.out.print("No.Of Mapping Elements in HashMap:");
               int num = inp.nextInt();
               for(int i=0;i<num;i++) {</pre>
                       inp.nextLine();
                       System.out.print("String:");
                       String key = inp.nextLine();
                       System.out.print("Integer:");
                       int value = inp.nextInt();
                       hashMap.put(key, value);
                for(Map.Entry m : hashMap.entrySet()){
                       System.out.println("Key = "+m.getKey()+", Value =
"+m.getValue());
               System.out.println(hashMap);
        }
```

Execution Results - All test cases have succeeded!

```
Test Case - 1
User Output
No.Of Mapping Elements in HashMap:
3
String:
hi
Integer:
1
String:
hello
Integer:
2
String:
world
Integer:
3
Key = hi, Value = 1
```

ID: 214G1A0527 Page No:

Srinivasa Ramanujan Institute of Technology 2021-2025-CSE-A

```
Key = world, Value = 3
Key = hello, Value = 2
{hi=1, world=3, hello=2}
Test Case - 2
User Output
No.Of Mapping Elements in HashMap:
String:
Students
Integer:
200
String:
Teachers
Integer:
String:
Principal
Integer:
Key = Teachers, Value = 5
Key = Students, Value = 200
Key = Principal, Value = 1
{Teachers=5, Students=200, Principal=1}

             Exp. Name: Write java program(s) that use collection
```

Date: 2023-01-01

Aim:

Write a java program(s) that use collection framework classes.(LinkedList class)

framework classes.(LinkedList class)

Source Code:

S.No: 34

Linkedlist.java

```
import java.util.*;
public class Linkedlist{
       public static void main(String[] args){
               Scanner inp = new Scanner(System.in);
               LinkedList<String> linkedList = new LinkedList<String>();
               System.out.println("No.Of Strings in LinkedList:");
               int num = inp.nextInt();
               inp.nextLine();
               for(int i=0;i<num;i++) {</pre>
                       System.out.println("Enter the String:");
                       linkedList.add(inp.nextLine());
               System.out.println("LinkedList:"+linkedList);
               System.out.println("The List is as follows:");
               Iterator<String> itr = linkedList.iterator();
               while(itr.hasNext()){
                       System.out.println(itr.next());
                }
        }
```

```
Test Case - 1
User Output
No.Of Strings in LinkedList:
Enter the String:
Hi
Enter the String:
Hello
Enter the String:
World
LinkedList:[Hi, Hello, World]
The List is as follows:
Ηi
Hello
World
Test Case - 2
ID: 214G1A0527 Page No:
Srinivasa Ramanujan Institute of Technology 2021-2025-CSE-A
User Output
No.Of Strings in LinkedList:
Enter the String:
Human
Enter the String:
Being
LinkedList:[Human, Being]
The List is as follows:
Human
Being
